

Phishing Email Analysis and IOC Extraction Report

Project: Phishing Email Analysis and IOC Extraction Workflow

Case Study: Track Your Package

Date: 24 June 2026

Analyst: Anji Gajula

Classification: Phishing Email

1. Executive Summary:

This report analyzes a phishing email that impersonates a package delivery notification to trick recipients into clicking a malicious tracking link. The attacker leverages sender spoofing, pixel tracking, and hyperlink manipulation to create urgency and encourage user interaction. The email is designed to collect user information or redirect victims to a malicious website.

2. Scenario Overview

The phishing email claims that the recipient has a package waiting for delivery and requests them to track its status using a provided tracking number. Instead of directing users to a legitimate courier website, the embedded hyperlink redirects victims to a malicious destination controlled by the attacker.

3. Phishing Techniques Identified

Spoofed Sender Identity

- The display name is Distribution Center to appear trustworthy.
- The actual sender email (contact@beginpro.club) does not belong to a legitimate shipping company.
- The sender attempts to impersonate a package distribution service.

Pixel Tracking

- Invisible tracking pixels are embedded in the email.
- These images notify the attacker when the recipient opens the email.
- This helps attackers identify active email addresses.

Hyperlink Manipulation

- The displayed tracking number appears legitimate.
- The hyperlink is designed to redirect victims to a fraudulent website.
- Users are encouraged to click without verifying the destination.

4. Indicators of Compromise (IOCs)

IOC Type	Value
Display Name	Distribution Center
Sender Email	contact@beginpro.club
Brand Used	Package Distribution Service
Attack Category	Phishing
Delivery Method	Malicious Hyperlink
Tracking Number	LZ8942357486EN

Track your package: # LZ8942357486EN

5. Analysis Findings

Subject Analysis

The subject line contains a fake tracking number to create urgency and encourage the recipient to check the shipment status.

Sender Analysis

Although the display name appears legitimate, the sender email address belongs to an unrelated domain (**beginpro.club**), indicating sender spoofing.

Content Analysis

The email uses delivery-themed language and a tracking number to create trust and persuade the recipient to click the embedded link.

Hyperlink Analysis

The visible tracking link disguises its true destination. Clicking the link could redirect users to:

- Credential harvesting websites
- Malware download pages
- Fake login portals

Pixel Tracking Analysis

Embedded tracking pixels allow the attacker to determine whether the email has been opened, making future phishing campaigns more targeted.

6. Detection Opportunities

- Inspect embedded URLs.
- Detect URL redirection or shortened links.
- Block known phishing domains.

7. Risk Assessment

Risk Level: High

Severity: High

Confidence: High

Category: Phishing / Credential Theft

Reasons

- Spoofed sender identity
- Fake package notification
- Hyperlink manipulation
- Email tracking through hidden pixels
- Potential credential theft

8. MITRE ATT&CK Mapping

Technique ID : T1566.002

Technique Name : Phishing: Spearphishing Link

The attacker delivers a phishing email containing a malicious hyperlink that redirects the victim to a fraudulent website for credential theft, malware delivery, or other malicious activity.

9. Recommended Actions

1. Do not click the tracking link.
2. Verify shipment notifications through official courier websites.
3. Block the sender's email address and domain.
4. Inspect embedded URLs using security tools before visiting them.
5. Report the phishing email to the security team.
6. Educate users about fake delivery scams.

10. Conclusion

This email is a phishing attempt that impersonates a package delivery notification to lure recipients into clicking a malicious tracking link. Multiple phishing indicators, including sender spoofing, hyperlink manipulation, and pixel tracking, confirm that the email should be classified as malicious and blocked.
